

## Avoiding Controlled Flight Into Terrain Accidents

Technological advances in situational awareness have dramatically reduced the number of General Aviation CFIT accidents over the last twenty years. Nevertheless CFIT accidents continue to occur and at least half of them are fatal.

This program acquaints the audience with the nature of CFIT accidents and discusses how pilots can accurately assess the risk associated with each flight and plan accordingly.

**Directions:** The LaPorte Aero Club is located on the northeast side of the field near the rotating beacon. Those driving in may park off South 150 West; those flying in may park on the east ramp.

Prior to attending a safety seminar, please review and abide by current CDC, State and Local health guidelines.
